

## Oracle Fusion Middleware Practice

Cloud Creek's Oracle Fusion Middleware and Development Services can assist your company whether you're upgrading a simple Oracle Forms Application or implementing a cutting edge SOA Integration project. Our expertise includes:

**Functional Planning and Architecture Design** is the core of Cloud Creek's Oracle FMW Services offering. Cloud Creek's expert staff knows that project success hinges on strategic planning in order to meet functional, performance, and scalability goals for your organization. Let our experts guide you through this critical phase of any project.

**Custom J2EE Development** using Jdeveloper or Hibernate and deployed on Oracle Fusion Middleware allow us to deliver a custom tailored solution for your individual business requirements. Our experts have built applications that power many of our most successful customers. From design, development, QA, and staff augmentation we are committed to meeting your high expectations.

**Oracle Forms** development is part of our DNA. Cloud Creek developed its first project on Oracle forms in 1997 and continues to use this rapid development tool that Oracle continues to enhance and support. After more than 10 years of Forms Development, we are experts in best practice design and development standards. Whether you want to develop a small departmental application or upgrade that mission critical 4.5 or 6i Forms application to 10g Web based Forms, Cloud Creek has a wealth of experience to make your project a success.

**Oracle Portal and SSO** implementations can be complex and risky as you develop and expose applications and content to new users for both internal and external purposes. Creek's experts can help make your project a secure, highly adopted, and low risk endeavor.

**Integration and SOA Implementations** using the latest Oracle tools allow you to leverage modern application integration and development strategies. Cloud Creek's experts can guide your organization through the complexity of integrating and building applications using Web Services, BPEL, BAM, and ESB.

**Highly Available and Scalable** middle tier architecture is a requirement for today's applications. With web traffic, transaction volumes, and complexity exploding it is critical that your systems are up to the challenge and able to keep pace. Cloud Creek's experts can lead you through design, best practices, and implementation of a highly available middle tier including BEA WebLogic, Coherence in Memory Data Grid or Oracle Application Server.

**Custom Application Development** for PL/SQL, PHP, C, C++ and Perl programming is no problem. Our senior team of experts and broad knowledge of diverse programming languages allows us to successfully design, development, deploy, and troubleshoot both new and legacy applications for Oracle environments.

"Cloud Creek was able to design and build an industry specific application that met our unique business requirements"
